

Git Teamwork Branching Workflow (MERN Project)

1. Clone Repository (First time only)

```
git clone https://github.com/esraaala79-tech/IT-System.git  
cd IT-System
```

2. Create Branch (Each person)

Person 1 (Auth): `git checkout -b feature-auth`

Person 2 (Tickets): `git checkout -b feature-tickets`

Person 3 (Admin): `git checkout -b feature-admin`

Person 4 (Frontend): `git checkout -b feature-ui`

3. Work on your feature

- Build your part (backend/frontend)
- Do not touch main branch

4. Save changes

```
git add .  
git commit -m "add feature"
```

5. Push branch

```
git push origin feature-auth (or your branch name)
```

6. Pull Request (GitHub)

- Go to GitHub
- Create Pull Request

- From feature-branch → main
- Wait for review and merge

7. Daily Update

git checkout main

git pull origin main

Rules:

- Never work on main
- Each feature has its own branch
- Always pull before starting work
